

IN THE SPECIFICATION:

The last paragraph bridging pages 10 and 11 has been amended as follows:

Fig. 8 is a longitudinal cross section showing another embodiment of the invention, wherein a long perforation [[38]] 52 for mist supply extending in the axial direction is perforated on a sleeve 16, at its thick section, circumferentially engaging a rotating shaft 10 and rotating integrally therewith, and the left end of the long perforation [[38]] 52 is closed by a plug 54. In addition, the right end of the long perforation [[38]] 52 communicates with a mist supply passage 56 for communicating with a rotary seal section 22 provided on the right side of the rotating shaft 10. Further, on the long perforation [[38]] 52, required numbers of mist supply ports 40 similar to those shown in Fig. 7 are perforated axially.
